

NorthPeak Reports

Enablement Guide — how to use it (for everyone on the team)

Long Tran

5 July 2026

A guide for anyone on the team. No technical knowledge needed.

NorthPeak Reports lets you get a good-looking report about your CRM — delivered to your inbox on a schedule — just by **describing what you want in plain English**.

1. Create a report

1. Press **Cmd-K** (Mac) or **Ctrl-K** (Windows) anywhere in Twenty, or click the pinned **"New report"** button at the top-right.
2. Choose **"Create report from a prompt."**
3. **Pick your data source** — the thing you want to report on (Opportunities, Companies, People, ...). This is the first choice, so the report is always built over the right records.
4. Then either **pick a template** for that data source, or choose **Create from scratch** and describe what you want, for example:
 - *"Weekly won deals by rep and region"*
 - *"Monthly won revenue by product tier"*
 - *"Open pipeline by lead source"*
5. Pick **Private** (only you) or **Workspace** (shared), then **Create report**.

The app reads your request, figures out exactly what to measure, and opens the new report in the **Builder**.

How do I know it understood me? Every report shows an *"Interpreted as:"* line in plain English — e.g. *"Total Amount and count of opportunities where Stage is Customer, grouped by Owner and Region."* If that's not what you meant, just tell the **AI assistant** in the builder.

2. Shape the report (Builder)

The Builder is a live, what-you-see-is-what-you-get preview of the email, with:

- **Top bar** — your report name, a **Data source** picker (switch what you're reporting on at any time), device preview, and **Preview & test**. Changes **save automatically** — the bar shows "Saved" (no Save button to remember).
- **Left rail — Content / Style** — drag in **blocks** (header, metric cards, chart, bar breakdown, table, **AI insights**, AI narrative, text, divider...) and set the theme (colour, font, light/dark).
- **Centre — the canvas** — your email. Click a block to select it. To reorder, click its **Move** grip to pick it up, then click a **"Move here"** slot to drop it (or use the **Up / Down** buttons). Add blocks or whole sections by clicking them in the left rail. Every change **saves automatically**.
- **Right rail — three tabs:**
 - **AI** — the **one assistant**. Tell it what you want in plain English (*"won revenue by rep, last 7 days"*, then *"group by region instead"*). It changes the data, the layout and the wording together, and asks a question if anything's unclear. This is the single place you "talk to" your report.

- **Block** — fine-tune the block you clicked (e.g. rows in a table, bar vs pie).
- **Setup** — your data source at a glance, **Preview & Send**, **Schedule** and **Subscribers**.

One assistant, not two boxes. Everything about *what the report measures* and *how it looks* goes through the AI assistant — there's no separate prompt to keep in sync.

3. Choose who gets it

In the **Setup** tab → **Subscribers**, add the workspace members who should receive the report. For privacy, reports can only be sent to **people in your workspace** — never to random external email addresses.

4. Put it on a schedule

In the **Setup** tab → **Schedule**:

- **Frequency** — Manual, Daily, Weekly or Monthly.
- **Send hour** — the hour of day it goes out.
- **Activate** — turns the schedule on. From then on it sends automatically. (Use **Pause** to stop it without losing anything.)

5. See what changed (trends)

If your report covers a time window (e.g. "...in the last 7 days"), add the **AI insights** block. It automatically compares this period with the one just before it and shows, for each headline number, whether it went **up** or **down** and by how much — plus a short, plain-English insight (e.g. "*Won revenue is up 18%; EMEA fell 22% and dragged the total*"). The percentages are calculated from your CRM data; only the wording is written by AI.

6. Trust the numbers

Every delivered email includes:

- the plain-English description of what was measured,
- how many records matched and the exact "**data as of**" time,
- a "**Verify in Twenty** →" link that opens the equivalent live view so you can check the figures yourself.

Every send is logged under **Deliveries** (in the NorthPeak Reports sidebar folder) with the status, row count and recipients — a full history you can audit any time.

FAQ

The numbers look off. Click *Verify in Twenty* on the report to open the live records and compare. Adjust your prompt and re-interpret.

Nothing was emailed. Check you added subscribers and that the report is **Active**. Ask an admin to confirm the email key is configured.

Can I report on things other than deals? Yes — mention companies, people, tasks or notes in your prompt (e.g. "*companies by industry and region*").
